

Galvanising action from non-state actors to help make 4 billion people resilient to climate change by 2030.

We have created a measurement framework for Non State Actors on resilience of people and natural systems. This will hold partners and members accountable to report on progress annually using human centred metrics.

We have created the Cities Race to Resilience encompassing all major cities networks – 25+ cities to join this initiative by COP26 with aim for 200 by COP27

Partners have pledged to make 2.3 billion people more resilient by 2030

Our partners have pledged to invest US\$3billion into resilience projects

34 partners have joined from 127 different countries

Risk Analytics in collaboration with McKinsey

Technical Backbone built: MAG, CR2 – Technical lead, ERG

Partners have pledged to increase the resilience of over 100 natural systems

Join as a metrics partner

Partner initiatives delivering on the universal measurement framework act as secretariats through which individual members can join.

Join as a transformation partner

Partners advancing Transformations are not expected to have secretariats. All Partners must meet the minimum criteria and fill out online form.

Join as a member

Individual organizations are invited to join the Race via a relevant Partner initiative.

JOIN THE RACE

The global campaign to rally leadership and support from businesses, cities, regions, investors for a healthy, resilient, zero carbon recovery.

What have Race to Resilience partners done so far?

The Race to Resilience is supporting **locally-led adaptation** where actors work from the ground up with local, indigenous communities to catalyse climate resilience across urban rural and coastal areas.

**Restore Australia:
Restoring the most
degraded landscapes**

**Training women in
high-quality brick
use in house building**

**Incentivising
investment in coastal
and marine capital**

We broadened the scope of the campaign to invite Partners advancing Transformations that are making **significant and innovative systemic changes** by altering the structural conditions and processes we currently operate in.

DARAJA : The Inclusive City - Community Forecasting and Early warning Service

DARAJA, which means 'bridge' in Swahili is a service that aims to improve weather and climate information services. DARAJA builds operational partnerships between the actors critical to the co-design of the products, dissemination channels and feedback loops. It is delivered via a range of digital and analogue tools, apps and resources hosted on a digital platform. Pilots in Nairobi and Dar es Salaam have shown strong impact results and a 20:1 benefit cost ratio in enhanced productivity and avoided climate related damage. The Service is also being adapted for deployment into Small Island States.

BFA Global's DF4CR

To understand the opportunity for digital finance and fintech to power greater climate resilience, BFA Global convened a Task Force of climate and financial service experts, including World Resources Institute, CGAP, PayPal, and the team of the UN Race to Resilience campaign. Together, the Task Force developed a Digital Finance for Climate Resilience (DF4CR) solutions map to provide an actionable way for stakeholders to understand the DF4CR opportunity and the concrete solutions that can grow climate resilience among vulnerable people in emerging markets.
